PROFESSIONAL SUMMARY

Entry-level DevOps/Cloud Engineer with hands-on experience deploying full-stack applications on AWS EC2 using Docker and Docker Compose, with Nginx as a reverse proxy. Comfortable working in Linux environments, using Git/GitHub for version control, and writing Bash scripts with the AWS CLI to automate infrastructure tasks. Has additionally configured and tested a multi-container Docker/Nginx/MySQL stack with a Jenkins pipeline definition. Builds on a full-stack development background (MERN) and is looking to apply this practical DevOps foundation in a junior DevOps, cloud support, or cloud engineering role.

TECHNICAL SKILLS

Cloud & DevOps: AWS EC2 (deployment & CLI-based provisioning), Docker, Docker Compose, Nginx (reverse proxy), Jenkins (pipeline basics), Linux/Unix

Version Control: Git, GitHub

Programming & Scripting: JavaScript (ES6+), Python, Bash

Backend & APIs: Node.js, Express.js, REST APIs, Django (basic), JWT, Socket.IO

Frontend: React.js, Tailwind CSS

Databases & Tools: MongoDB, MySQL, Postman, VS Code

PROJECTS

RideNow — Full-Stack Ride Booking Application | [AWS EC2 Deployment](#)

React.js, Node.js, Express.js, MongoDB, Docker, Docker Compose, Nginx, JWT, Socket.IO

- Containerized and deployed a full-stack ride-booking application on AWS EC2 using Docker and Docker Compose, running the frontend and backend as isolated services.
- Configured Nginx as a reverse proxy to route REST API and Socket.IO traffic to the correct backend service.
- Set up production environment variables, JWT-based authentication, CORS policies, and MongoDB connectivity.
- Diagnosed and resolved deployment issues — API connectivity, CORS errors, WebSocket failures, and container networking — using Docker logs and container-level debugging.

Django Notes Application — Containerized Multi-Service Stack | [Docker, Nginx, MySQL, Jenkins \(local practice\)](#)

Docker, Docker Compose, Nginx, Django, MySQL, Jenkins

- Configured and tested a multi-container application locally with Docker Compose, orchestrating separate containers for a Django backend, an Nginx reverse proxy, and a MySQL database.
- Wrote a Dockerfile to containerize a Python/Django service, including dependency installation and a Gunicorn-based startup command.
- Set up container healthchecks for the application and database services to verify service readiness.
- Authored a Jenkinsfile defining build, image-push, and deploy stages to practice structuring a CI/CD pipeline.

E-commerce Web Application | [React.js, Node.js, Razorpay](#)

React.js, Node.js, Express.js, Tailwind CSS, Razorpay API, Git/GitHub

- Built a responsive e-commerce application with product listing, cart management, and checkout using React.js, Node.js/Express, and Tailwind CSS.
- Integrated the Razorpay payment gateway and implemented the payment confirmation flow.
- Managed the codebase with Git/GitHub across separate frontend and backend directories.

EDUCATION

B.Tech in Computer Science Engineering (Lateral Entry) — Expected 2028

Dr. A.P.J. Abdul Kalam Technical University (AKTU)

Diploma in Computer Science Engineering — Completed, 74.5% (First Division)

Board of Technical Education, Uttar Pradesh (BTEUP)
